

INVITATION

Erection and operation of a plant is a complex process. Challenges and solutions are going to be discussed during this webinar.

Safe Operations – EKATO Condition Monitoring

on November 4, 2021

from 9.00 – 10.30 am (CET)

- Impressions from Construction Site: pics from our supervisors and hints what to address from the beginning of a project
- Brief overview on Condition Monitoring options for agitators. What parameters can be monitored? What options are available?

Target group

All responsible people dealing with agitators.

General managers, plant managers; process engineers, buyers, project managers as well as anyone interested in improving the reliability of a plant.

Objectives

Especially in the design and project phase there is a lack of interest in challenges arising during erection, start up and operation of a plant. A stronger focus in an early phase can help to make the process smoother and to save money on the long run.

Price & Registration

The webinar is free of charge. Please register here:
