

Minerals Processing – Quality meets Price

Leaching and recycling of precious metals becomes more and more important corresponding to the development of EV industry and energy storage. A huge amount of agitated leaching, extraction and precipitation processes are involved in order to efficiently produce these materials and make them available for industrial applications.

Webinar

**September 21,
2023**

**3.00 – 3.45 pm
(CEST)**

**Free of
charge**

Precious metal leaching projects are quite sensitive to capital cost. But what about operating and maintenance cost? This webinar will focus:

- cost saving options
- plant availability and profitability
- illustrated by various success stories on brownfield projects

Together with this we will present the new EKATO VISCOPROP MP impeller as a cost-efficient high-quality process solution.

Objectives

EKATO consults and accompanies its customers throughout their entire customer journey. Starting with the initial idea, through possible trials and subsequent scale-up into the industrial mixing process, to the actual mixing system.

In this webinar we want to show how well known EKATO quality and reliability can be combined with optimized manufacturing procedures – which then result in significant cost saving options.

Target Group

General managers, process engineers, R&D specialists, production managers, buyers, project managers as well as anyone interested in process development, equipment engineering and production improvement.
