

Efficiency Screening

Discover how our brand-new Efficiency Screening service identifies optimization opportunities in mixing, energy use, and product quality. Real industrial case studies show how quick wins and long-term improvements can be achieved with minimal investment.

Efficiency Screening as a service

- Energy efficiency
- Process efficiency (robustness, cycle times, product quality)
- Mechanical efficiency
- Examples
- How can you profit from this service?

Are your stirred processes running as efficiently as they could?

Join our expert-led webinar to learn how targeted **Efficiency Screenings** can help you reduce energy consumption, improve product quality, shorten cycle times and increase mechanical reliability — all with minimal investment.

This session introduces our structured screening approach for stirred tanks and reactors, based on real-world applications in chemical, pharmaceutical, and biotechnological industries. You'll gain valuable insights into how small adjustments in agitation technology can lead to significant improvements in plant performance and cost-efficiency.
